

DocKIT migrates documents from a Legacy System to SharePoint for a leading global technology company

The Background

Our customer was engaged in a content migration project for one of their customers that required a system upgrade from a legacy system to the new SharePoint environment to keep pace with changes in technology trends. The customer encountered some challenges during the import of documents from the legacy system into SharePoint 2007 and was seeking a powerful and easy-to-use solution for moving documents from the legacy system to SharePoint.

Our customer also faced problems in handling the absence of metadata on some of the files/folders/versions migration of documents.

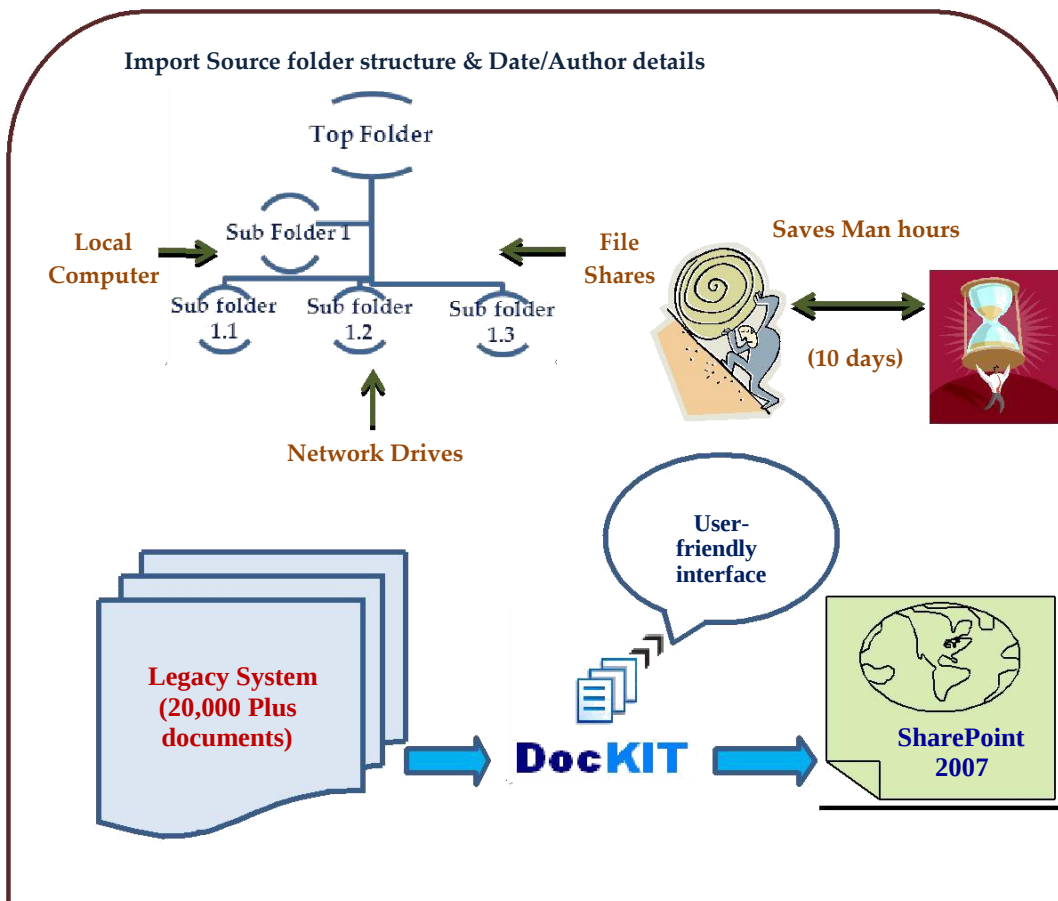

Know Our Customer

Our customer is a leading global technology & business solutions provider.

The Situation

Our customer signed a Documents conversion project for one of their customers from a legacy system to SharePoint 2007. During this content migration they faced challenges in terms of time, data volume and complexity in the entire data migration process.

Role of DocKIT

DockIT Solution Advantage

- ✓ DockIT assisted our customer's SharePoint solution offering to their client by supporting migration of large volumes of documents with consistent source folder/sub folder structures.
- ✓ The most demanding challenge faced was in retaining the original created and modified date of files which was efficiently handled by DockIT's System Dates/System Users feature.
- ✓ Our customer benefitted from the user-friendly GUI and power of the tool in conducting a speed transfer of 20,000 plus documents.
- ✓ DockIT's exclusive file naming convention feature helped to alter file & folder names during the migration process with the added advantage of resolving issues related to peculiar filename characters.
- ✓ DockIT's pre-migration tool improved documents migration performance with provisions to detect migration errors before the actual migration.
- ✓ There was also a substantial gain in manpower savings of 10 man-days during the migration process by using the flexible automated and schedule run features.

The Package

DockIT supports Microsoft SharePoint Server 2010 / Microsoft SharePoint Foundation 2010 and Microsoft Office SharePoint Server 2007 (MOSS 2007) / Microsoft Windows SharePoint Services v3.0 (WSS 3.0) environments.
